Introduction

Pass through support of 4K (UHD), 2560x2048, IR, RS-232, bi-directional Ethernet, and lossy/lossless audio signals up to 328ft (100m). The 100CE extenders provide an affordable, high quality, solution for your audio and video needs.

Package Contents

- 1 x AT-UHD-EX-100CE-TX
- 1 x 48V DC power supply
- 2 x Female captive screw connector (3 pin: RS-232 and 5 pin: IR)
- 1 x Pair of wall/table mount ears
- 1 x Pair of screws for wall/mount ears
- 1 x IR emitter (AT-IR-CS-TX)
- 1 x User manual

Features

- Extends IR, RS-232, Ethernet, and audio/visual content up to 328ft over a single category cable
- Supports resolutions up to 4K (UHD) 60Hz @ chroma sub-sampling 4:2:0 8-bit
- IR ports for use with IR remote controls and 3rd party IR controllers
- Bi-directional Ethernet pass through
- Provides PoE (Power over Ethernet)
- Multichannel audio pass through up to Dolby TrueHD, DTS-HD Master Audio, and Dolby Atmos
- Full 3D pass through
- HDCP 2.2 compliant
- Field updatable firmware

*Remove the side screws from the case and use for bracket installation

Category Cable

For the category cables used in the installation of these products, please be sure to use a 568B termination as pictured below:

Use the table below to verify the best category cable for the installation.

Performance Rating		Type of LAN cable	
Wiring	Shielding	CAT5e/6	CAT6a/7
Solid	Shielded (STP/FTP)	***	****
	UnShielded (UTP)	**	N/A
Stranded - Patch cable (Not recommended)	Unshielded (UTP)	*	N/A
	Shielded (STP/FTP)	*	N/A
Termination		Please use EIA/TIA-568-B termination	

Important! 4K (UHD) signals are sensitive to cable quality and installation technique. It is recommended to use CAT6a/7 solid core cables for best results.

Note: For cable distances see the specifications on page 10

Connector

Connector type and size is very important to ensure extenders work correctly. Please use the matching cable type with the correct RJ45 connector.

CAT5e and CAT 6 cables should use only CAT5e RJ45 connectors

CAT6a cables should use only CAT6a connectors

CAT7 cables should use only CAT7 connectors

Using the wrong size of connectors may result in interference causing loss of signal.

Important! "EZ RJ45 connectors" are not recommended with HDBaseT extenders. Doing so may result in stray EMI/RFI signals to be picked up and interfere with audio and video transmission.

Panel Description

1. **Ethernet** - Connect to a router to send Ethernet signals
2. **Firmware** - Use a Mini-B USB to USB A cable to connect to a Windows computers for updating
3. **Yellow Link LED:** Signal indicator for the HDBaseT OUT port
 - Solid - Good signal from the CAT port
 - Blinking - Category cable is disconnected or not receiving signals
 - No Light - No signal is being received from the CAT port
- Green Power LED:** Power indicator
 - Solid - Plugged in and receiving power
 - Blinking - Power is intermittent or there is a problem with the cable
 - No Light - No power is passing from the wall outlet to the transmitter (check the cable or outlet)
4. **DC 48V** - Connect included captive screw power adapter here
5. **RS-232** - Bidirectional RS-232, send signal to or from a control system, PC, source, or display
6. **IR** - Connect IR emitter (included) or 3rd party control box to this port
7. **HDBaseT OUT** - Connect a category cable from here to an AT-UHD-EX-100CE-RX (not included)
8. **HDMI IN** - Connect HDMI or DVI (with adapter) source here
 - Ex. Blu-ray player, cable box, HDDA series, H2H series, etc

Captive Screw

Captive screw connectors are an added feature on the UHD extender. The captive screw connectors allow you to cut cables down to a suitable length, reduce cable clutter, while providing a more reliable connection.

Connecting

When connecting the cables to the female captive screw connector it is important that the wires be terminated correctly. The female captive screw connector has a contact plate at the top and must have the wires touching it for signal to pass. When wired correctly (see picture A) the signal will pass, incorrectly (see picture B) no signal will pass.

The captive screw connectors have a contact bar that is adjusted to compress the wire against the top contact plate. Use the screws at the top of the connector to compress the wire against the contact plate.

Clockwise
Turn the screws clockwise to raise the contact bar to the upper contact plate and hold the wires in place.

Counter Clockwise
Turn the screws counter clockwise to lower the contact bar to release the wires.

Power

RS-232

IR

Female captive screw connectors are included: Power (see picture 1), RS-232 (see picture 2), and IR (see picture 3).

Black: - White: +

The power cable (picture 4) will have exposed wires. Each wire is encased in a different colored cover.

Pin out color will differ per RS-232 cable.

RS-232 pin out will be determined by the RS-232 cable and will connect as Rx (receiver), Tx (transmitter), and $\perp$ (ground). (See picture 5)

Note: The IR receiver is optional for the UHD-EX-100CE-KIT and RX box. The compatible IR receiver (AT-IR-CS-RX) can be purchased through atlona.com.

The wires of the emitter and receiver have been marked to differentiate the pin outs.

— Signal (S)
— Ground ($\perp$)

The included IR emitter has two wires: signal and ground. Signal will have a solid line and ground will be blank. The IR emitter will plug into the IR OUT ports.

— Signal (S)
— Ground ($\perp$)
— Power (P)

There are three wires on the IR receiver (AT-IR-CS-RX sold separately): signal, ground, and power. Signal has a dotted line, ground will be blank, and power will have a solid line. The IR receiver will plug into the IR IN ports.

Power Chaining

Multiple kits can be powered by one power supply. The included power supply can support up to 3 kits. To power four kits use the optional power supply AT-PSU-48V1.25A (purchase through atlona.com).

To chain one power supply to three transmitters (four when using AT-PSU-48V1.25A), use two wago splicing connectors, 18/2 AWG stranded wire, a ventilated 1 RU rack shelf, zip ties, and high temperature hook and loop (velcro) strips will be needed.

1. 1 RU rack shelf - Should be at least 10in / 254mm deep, fit in a standard 19" rack, and must be well ventilated. Use the rack screws (included with 19" racks) to secure the rack shelf to the back/front of the rack after power chaining set up is completed.
2. Transmitters - Place 3 or 4 units on the rack shelf. Use high temperature (up to 185°F / 85°C) hook and loop (velcro) to secure the transmitters to the rack.
3. Power supply - Place the included power supply (or the AT-PSU-48V1.25A) on the rack with enough room to connect the included IEC power cable. Use twist ties to secure the power supply and cable to the rack.
4. Wago splicing connectors - Connect the wires from the power supply cable to the wago splicers. Connect the white wire (power/+) to one splicer and the black wire (ground/-) to the second splicer.
Note: Only one wire per port.
5. 18/2 AWG stranded wire - Connect the individual wires to the wago splicers and the transmitter captive screw connectors. There will be two colors of wires (black/red) which will need to be designated - and +. Each color will need to be the same across all connections to ensure no signals are crossed. Strip the ends of each wire and place one end in the appropriate wago connector and the other to the corresponding captive screw connector. Use the zip ties to keep all wires in place and organized.

Product	CE, FCC

**4096x2160@50/60Hz & 3840x2160@50/60Hz supported @ chroma subsampling 4:2:0 8-bit only

Safety Information

Safeguards

To reduce the risk of electric shock, do not expose this product to rain or moisture

Do not modify the wall plug. Doing so will void the warranty and safety features.

If the wall plug does not fit into your local power socket, hire an electrician to replace your obsolete socket.

This equipment should be installed near the socket outlet and the device should be easily accessible in the case it requires disconnection.

Precautions

FCC regulations state that any unauthorized changes or modifications to this equipment, not expressly approved by the manufacturer, could void the user's authority to operate this equipment.

Operate this product using only the included external power supply. Use of other power supplies could impair performance, damage the product, or cause fires.

In the event of an electrostatic discharge this device may automatically turn off. If this occurs, unplug the device and plug it back in.

Protect and route power cords so they will not be stepped on or pinched by anything placed on or against them. Be especially careful of plug-ins or cord exit points from this product.

Avoid excessive humidity, sudden temperature changes or temperature extremes.

Keep this product away from wet locations such as bathtubs, sinks, laundries, wet basements, fish tanks, and swimming pools.

Use only accessories recommended by Atlona to avoid fire, shock, or other hazards.

Unplug the product before cleaning. Use a damp cloth for cleaning and not cleaning fluid or aerosols. Such products could enter the unit and cause damage, fire, or electric shock. Some substances may also mar the finish of the product.

Never open, remove unit panels, or make any adjustments not described in this manual. Attempting to do so could expose you to dangerous electrical shock or other hazards. It may also cause damage to your product. Opening the product will void the warranty.

Do not attempt to service the unit. Disconnect the product and contact your authorized Atlona reseller or contact Atlona directly.

Warranty
