Application Example:

Conference Room Automation

Using an Aurora's AV over IP or HDBaseT solutions, a room can easily have the infrastructure to deliver the content to the display(s). These solutions have wall plates and box versions allowing any size system to be created within the room. The RXT Touch Panels will allow full control of the routing in addition to other peripherals such as lighting, display control and more. With the built-in web server, it can even remotely send control pages to mobile phones or computers and even off site if required. No need for additional control boxes as it is built in saving cost and simplifying the system.
