AVPro edge audio

2CH Audio Matrix
AC-MAX-24

The AC-MAX-24 is AVPro Edge's newest multi-room audio solution for applications where full matrix capability is required. Designed with 20 analog input pairs, 2 AEX selectable analog/digital inputs, and 2 Coaxial/Toslink digital inputs, any of the 24 inputs may be routed to another output or group of outputs using the comprehensive AVPro Edge User Interface (digital signals are not downmixed).

Four, 12V output triggers provide for amplifier turn-on, with full API adjustment for individual channel volume level, balance, tone adjustment, audio-follow for zone grouping, and equalization parameters. IP controllable, the AC-MAX-24 can be partnered to work seamlessly with control systems from all major automation companies. The 2RU, rack-mountable AC-MAX-24 audio matrix is fully equipped to perfectly integrate with multichannel power amplifiers of your choice for high-resolution, whole-house audio distribution.

FEATURES

- Comprehensive API and AVPro Edge GUI for customized configurations
- Fully integrates with major third party automation systems, such as C4, Crestron, Elan, and URC via IP control
- Four digital inputs; two are extension-based and also selectable to route analog signals, plus two Coaxial / Toslink
- AVPro Edge 10-year warranty plus world-class tech support
