WolfPack 10-Outlet Power Strip
# SKU: WP10OPS

The Instructions

With the progress of science and technology, more and more audio products, if these products are combined together to install a lot of sockets, which brings inconvenience to the user. Timing device can effectively according to the boot previous order before and after, shutdown is successively and switches connected by a kind of equipment of electrical equipment, avoid some human error operation, completely solve the terminal equipment (such as power amplifier, speakers, etc.) may be due to this damage caused by errors, and also can reduce the impact of the electrical equipment on the transmission line start current. Because of its performance characteristics, system administrators can never leave the complex open and close, cut off the power supply of electrical equipment, sound engineering and television broadcasting system computer network system and other electrical engineering essential equipment.

Introduction to front and back panel functions:

1. Separate Each Control Switch
2. Input Voltage Display
3. 10 Channel Controllable Output Socket
4. Reset The Keys
5. Power Input Line

Technical parameters:

1. Power Supply: AC 110V-220V
2. Rated Output Voltage: AC 220V /50Hz
3. Controllable Power Supply :10 Channels
4. Each Action Delay Time :1 Second
5. Each Output With Digital Display
6. Power Switch Control Power Supply
7. Single Rated Output Power Supply: 15A
